Editorial.....

The International Risk Day for Disaster Reduction (DRR) is opportunity an to acknowledge the progress being made toward reducing disaster risk and losses in lives, livelihoods and health. Disasters impact low- and middle-income countries disproportionately, particularly in terms of mortality, numbers of people injured, displaced and homeless, economic losses (as a percentage of GDP) and damage to critical infrastructure. We cannot eradicate

poverty and hunger if we don't step up investments in disaster risk reduction. United Nations General Assembly for a day to promote a global culture of risk-awareness and disaster reduction. Held every 13 October, the day celebrates how people and communities around the world are reducing their exposure to disasters and raising awareness about the importance of reining in the risks that they face. It is also at the local level that capacities need to be strengthened urgently. Sudden onset disasters displace millions of people every year. Disasters, many of which are exacerbated by climate change, have a negative impact on investment in sustainable development and the desired outcomes. International cooperation for developing countries through Official Development Aid (ODA) and capacity building is essential to boost disaster resilience in the face of extreme weather events and other natural and man-made hazards. DRR is a part of sustainable development, so it must involve every part of society, government, non-governmental organizations and the professional and private sector. It therefore requires a people-centred and multi-sector approach, building resilience to multiple, cascading and interacting hazards and creating a culture of prevention and resilience.
